Technical Data Sheet

AQUAFIN®-CJ1
Injection tube for waterproofing construction joints in concrete

Properties:

Ollicially approved for the use in system with
AQUAFINP resins.
Injection discrete of the transport channel.
Cement paste cannot enter the tube during
concreting.
Easy to handle by special fixing system.
No twisting whan insalled from the roll.
The injection moterial can pescape to all sides.
The impector moterial can escape to all sides.
The smooth surface avoids unwanted bonding
between tube and concrete so that the ube ismains compressible for years as it will not be closed by sintering.

Areas of application:
Single wellad, PVC based tube with valve openings allowing injected resins to escape from the tube into construction joints to reflective sealing and waterproofing orderination joints to reflective sealing and waterproofing orderination joints to reflective sealing and waterproofing groups and the roll may be application of the proportion growth and the roll may be application of the special form the proportion of the proportion growth and the roll may be application of the proportion growth and the roll may be application of the special proportion of the proportion growth and the roll may be applicated with waterproofing growth and the roll may be applicated with waterproofing growth and the roll may be applicated with waterproofing growth and the roll may be applied to the water enters the joins, the tubes can be injected with waterproofing growth and the ACMARINAPT or P4, creating a waterfight seed within the joint.
