

INDU-FibreFiller

Thixotropic material

Art.-No. 5 55106

Properties:

INDU-FibreFiller can be used to thicken and improve the thixotropy of all solvent free INDUFLOOR coatings.

The addition of INDU-FibreFiller controls the slip and flow properties so that non-slip smoothing mortars for vertical or strongly sloping surfaces can be produced on site.

Technical Data:

Packaging: 2 kg bag and 10 kg sack
Storage: 36 months when stored cool and dry above +10° C in the original unopened packaging.

Application:

INDU-FibreFiller is supplied in a ready to use powder form.

INDU-FibreFiller can be mixed into the coating material (best into the resin component) with a suitable rotating mixer with paddle (rapid stirrer).

Ensure an even lump free preparation. The addition rate lies between 0.5 up to a maximum of 5% by weight and is dependent on the thickness to be applied and the degree of fall on the substrate to be coated.

Please observe a valid EU Health & Safety Data Sheet.
